Subject Code: 24CSP-310

Q1.

Given a table containing information about bank deposits and withdrawals made using Paypal, write a query to retrieve the final account balance for each account, taking into account all the transactions recorded in the table with the assumption that there are no missing transactions.

`transactions` Table:

Column Name	Type
transaction_id	integer
account_id	integer
amount	decimal
transaction_type	varchar

`transactions` Example Input:

transaction_id	account_id	amount	transaction_type
123	101	10.00	Deposit
124	101	20.00	Deposit
125	101	5.00	Withdrawal
126	201	20.00	Deposit
128	201	10.00	Withdrawal

Example Output:

account_id	final_balance
101	25.00
201	10.00

Solution:

```
SELECT ACCOUNT_ID,
SUM(
  CASE
    WHEN TRANSACTION_TYPE='Deposit' THEN AMOUNT
    WHEN TRANSACTION_TYPE='Withdrawal' THEN -AMOUNT
    ELSE 0
    END
) AS FINAL_BALANCE
FROM TRANSACTIONS
GROUP BY ACCOUNT_ID
```
